Sequence 18697, Application US/09252991A

Patent No. 6551795

GENERAL INFORMATION:

APPLICANT: MATC. J. Rubenfield et al.

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

TITLE OF INVENTION: ARRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: ARRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: APPLICATION NUMBER: US/09/252,991A

CURRENT APPLICATION NUMBER: US 60/074,788

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-02-18

NUMBER OF SEQ ID NOS: 33142

SEQ ID NO 18697
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     GENERAL INFORMATION:
APPLICANT: PXE International, Inc.
APPLICANT: Diversity of Hawaii
TITLE OF INVENTION: Mutations in a gene encoding an ABC transporter (MRP6) causing
TITLE OF INVENTION: Pseudoxanthoma Elabticum
FILE REFERENCE: PXE-001

Sequence 19339, Application US/09252991A
Patent No. 6551795
GENERAL INFORMATION:
APPLICANT: MARC J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: ABRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
CURRENT APPLICATION NUMBER: US/09/252,991A
CURRENT FILING DATE: 1999-02-18
PRIOR FILING DATE: 1998-02-18

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

more The present sequence represents a peptide capable of binding Rheeus D antibodies (1). Also described in the present invention are: (1) a nucleic acid (II) encoding (1); (2) a vector (III) comprising one or more (II) operably linked to an expression control system; (3) a cell (IV) comprising (II) or (III); (4) preparing (1); (5) identifying (M1) peptides having immunologic properties of Rhesus D protein epitopes comprising subjecting an antibody/antibody fragment recognising an epitope of Rhesus D protein to several panning rounds with a phage display library, and identifying immunogenic peptide sequences which are

```
mimotopes which differ in their amino acid sequence from the amino acid sequences of Rhesus D protein; and (6) peptides (V) with immunological properties of Rhesus D protein epitopes obtained by (M1). (I) is used to manufacture an agent for the diagnosis, therapy or prophylaxis of diseases associated with Rhesus D antigen, e.g. haemolytic disease of the newborn (HDN) or idiopathic thrombocytopaenic purpura (ITP), for the manufacture of an affinity reagent for anti-Rhesus D antibodies purified or removed from body fluids or immunoglobulin preparations. Using (I) as an immunogen to raise anti-Rhesus D antibodies avoids using immunisation with foreign erythrocytes thereby avoiding the risk of transmission of viral diseases like AIDS and hepatitis B

Hofmann A, Fisch I; Miescher S,

WPI; 2001-383568/41.

Novel peptides capable of binding Rhesus D antibodies are used to manufacture an agent for the diagnosis, therapy or prophylaxis of diseases associated with Rhesus D antigen, e.g. hemolytic disease of the newborn (HDN).

Example 1; Page 8; 19pp; English.

The present invention describes peptides capable of binding Rhesus D antibodies (I). Also described in the present invention are: (I) a nucleic acid (II) encoding (I); (2) a vector (III) comprising one or more (II) operably linked to an expression control system; (3) a cell (IV) comprising (II) or (III); (4) preparing (I); (5) identifying (M1) epptides having immunologic properties of Rhesus D protein epitopes comprising subjecting an antibody/antibody fragment recognising an epitope of Rhesus D protein to several panning rounds with a phage 

display library, and identifying immunogenic peptide sequences which are minotopes which differ in their amino acid sequence from the amino acid sequences of Rhesus D protein; and (6) peptides (V) with immunological properties of Rhesus D protein epitopes obtained by (MI). (I) is used to manufacture an agent for the diagnosis, therapy or prophylaxis of chance of diseases associated with Rhesus D antigen, e.g. haemolytic disease of the newborn (HDN) or idiopathic thrombocytopaenic purpura (ITP), for the manufacture of an affinity reagent for anti-Rhesus D antibodies purified or removed from body fluids or immunoglobulin preparations. Using (I) as an immunogen to raise anti-Rhesus D antibodies avoids using immunisation with foreign erythrocytes thereby avoiding the risk of transmission of viral diseases like AIDS antibody avoiding the risk of transmission of warn an anti-Rhesus D (RhD) antibody related peptide which is used in an example from the present invention

New polypeptides derived from Streptococcus agalactiae are useful to provide detection of, and vaccination against, Group B Streptococcus infections, particularly to prevent infection in neonatals.

Claim 1; Fig 1; 178pp; English

AAU03601-AAU03722 represent Group B Streptococcus (Streptococcus agalactiae is an encapsulated bacterium which is a major pathogen of humans causing sepsis and meningitis in neonates as well as adults. The S. agalactiae antigenic polypeptides are used to vaccinate against Group B Streptococcus infections, particularly to prevent infection in new born children arising from the maternal genital tract. An immunogenic composition is useful in the preparation of a medicament for the treatment or prophylaxis of Group B Streptococcus infection. The invention does not have the disadvantages of varied response rate associated with prior art

the 6213 antisense sequences given in the specification where expression
of the nucleic acid inhibits proliferation of a cell. Also included are:
(1) a vector comprising a promoter operably linked to the nucleic acid
cenceding a polypeptide whose expression is inhibited by the antisense
nucleic acid; (2) a host cell containing the vector; (3) an isolated
containing the vector; (3) an isolated
antisense nucleic acid; (4) an antibody capable of specifically binding
the polypeptide or its fragment whose expression is inhibited by the
antisense nucleic acid; (4) an antibody capable of specifically binding
the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular
proliferation or the activity of a gene in an operon required for
proliferation, (7) identifying a compound that influences the activity of
the gene product or that has an activity against a biological pathway
controliferation, or that inhibits proliferation or the biological
centured for proliferation. or that inhibits proliferation of an
compound a gene required for cellular proliferation of an
compound activity; (1) a cullure comprised gene or its gene product lies
compound activity; (11) a cullure comprising strains in which the gene
compound is activity; (11) a cullure comprising strains in which the gene
compound the each of the strains is present in a culture or collection of
                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                      Antisense; prokaryotic essential gene; cell proliferation; drug design.

strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a recombinant DNA construct comprising a promoter functional in a plant cell, where the promoter is positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a transformed plant having an improved property. The plant is a crop plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Recombinant DNA construct; transformed plant; improved plant property; cold tolerance; heat tolerance; drought tolerance; herbicide; osmosis; pathogen tolerance; pest tolerance; plant disease resistance; cell cycle pathway modification; plant growth regulator; homologous recombination; seed oil yield; protein yield; carbohydrate; nitrogen; phosphorus; photosynthesis; lignin; galactomannan; bacterial polypeptide.

baving an improved property comprises transforming a plant with the recombinant DNA construct and growing the transformed plant, where the polynucleotide or polypeptide is useful for improving plant properties.

The recombinant DNA construct is useful for improving plant properties.

The recombinant DNA construct is useful for improving plants with construct is useful for producing plants with the recombinant properties, e.g. improved cold, heat or drought tolerance, tolerance to herbicides, extreme osmotic conditions, pathogens or peats, increased resistance to plant disease, better growth rate by modification of the construction of the and/or content, improved yield by modification of carbohydrate, nitrogen or phosphorus use and/or uptake, by modification of phososynthesis or by providing improved plant growth and development under at least one stress condition, improved lignin production or improved galactomannan condition, improved lignin production or improved galactomannan production. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic form part of the printed specification but was obtained in electronic form part of the printed specification but was obtained in electronic command the part of the printed specification but was obtained in electronic command the command of the printed specification but was obtained in electronic command the command of the printed specification but was obtained in electronic command command the command of the printed specification but was obtained in electronic command c

cc (1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation, (7) identifying a compound that influences the activity of identifying a proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway crequired for proliferation. The test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture compound that inhibits product is overexpressed or underexpressed; (12) determining the extent compound is activity; (11) a culture compound that inhibits proliferation of an organism. The antisense nucleic acids are useful for the strains is present in a culture or collection of the strains is present in a culture or collection of collectation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, crequired for proliferation in cells other than S. aureus, S. typhimurium, crequired for proliferation in cells other than S. aureus, S. typhimurium, che terraget prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed sequence is encoded by one of the terraget processed by one of the terraget processed by one of the terraget process of the particle of the patined for proliferation of the patined sequence of the patined for proliferation of the patined sequence of the patined for proliferation of the patined sequence of the patined for proliferation of the patined sequence of the pa

The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

Claim 25; SEQ ID NO 66258; 1766pp; English.

```
The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid conditions are:

(1) a vector comprising a promoter operably linked to the nucleic acid.

(2) a host cell containing the vector; (3) an isolated or nucleic acid; (2) a host cell containing the vector; (3) an isolated or antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibited by the contisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation, (7) identifying a compound that influences the activity of required for that has an activity against a biological pathway or which a proliferation, or that inhibits cellular proliferation of an organism acts; (9) manufacturing an antibiotis; (10) profiling a compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotis; (10) profiling the extent to which each of the strains is present in a culture or collection of compound that inhibits the extent of surains; or (13) identifying the target of a compound that inhibits the configuration of an organism. The antisense nucleic acids are useful for elemtifying proteins or screening for homologous nucleic acids required for endidate molecules for rational and an arrangement or product and dideterminal acids are useful for elemtifying proteins or screening for mandiscent and acids are useful for elementary and accide and organism. The antisense nucleic acids required for an argument or an organism and accident and organism and accident accident accident and accident 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Streptococcus; GAS; GBS; group B streptococcus; Streptococcus agalactiae; group A streptococcus; Streptococcus pyogenes; antibacterial; antinflammatory; infection; vaccine; meningitis; gene therapy.
           New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     . . 0

The invention relates to a protein (ABP25413-ABP30895) from group B streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus pyogenes), comprising one of 5481 sequences (S1), given in the specification. The proteins have antibacterial and antiinflammatory activity. (1), nucleic acids encoding (1), ABN66044-ABN71526 and activity antibodies that bind (1) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (1) are used to detect Streptococcus in a biological sample. (1) is used to detect Streptococcus in a compound binds to (1). A composition comprising (1) or a nucleic acid encoding (1), may be used to recombinantly produce (1) and may be used to recombinantly produce (1) and may be used in gene therapy. Antibodies to (1) are used for affinity contractors and distinguishing/identifying
                                                                                                                                                                                                                                                                                                                                                                    New Streptococcus protein for the treatment or prevention of infection or disease caused by Streptococcus bacteria, such as meningitis, and for detecting a compound that binds to the protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Antisense; prokaryotic essential gene; cell proliferation; drug design.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

                                                                                                                                                                                                           The invention relates to an isolated nucleic acid comprising any one of the hurleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a proinferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid nucleic acid, (2) a host cell containing the vector; (3) an isolated polypeptide whose expression is inhibited by the antisense nucleic acid, (4) an antibody capable of specifically binding the polypeptide of its fragment whose expression is inhibited by the antisense nucleic acid, (4) an antibody capable of specifically binding the polypeptide, (6) inhibiting callular proliferation or the activity of a gene in an operon required for proliferation or the activity of a gene in an operon required for cellular proliferation, (7) identifying a compound that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or the biological pathway in which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profilling a compound's activity; (11) a culture comprising strains in which the extent compound's activity; (11) a culture comprising strains in which the extent convict expressed; (12) determining the extent conviction of an organism. The antisense nucleic acids required in a proliferation of an organism. The antisense nucleic acids required for callular proliferation to reconside and uncleic acids required for alloner processes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                     New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              typhimurium
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Antisense; prokaryotic essential gene; cell proliferation; drug design.

the inventories and interpretation where expression the inventories of the included are confirmed to the nucleic acid inhibite proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid, (2) a host cell containing the vector; (3) an isolated or polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid, (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation, (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway to the proliferation, (6) identifying a gene required gene or its gene product lies (6) inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound; activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent or the operation of the strains; or (13) identifying the target of a compound that inhibits the strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids are useful for the proliferation of an organism. The antisense mucleic acids are useful for the proliferation of an organism. The antisense mucleic acids are useful for the proliferation of an organism of the trains of the strains in the acids are useful for the proliferation of an organism. The antisense mucleic acids are useful for the proliferation of an organism of the trains of the strains is the acts that the proliferation of an organism of the trains of the strains and the proliferation of the proliferation of the organism of the proliferation of the proliferation of the organism of the proliferation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained

Streptococcus agalactiae protein sequence, SEQ ID 300.

24-FEB-2005

ADV87906;

ADV87906 standard; protein; 475 AA.

RESULT 12

4DV87906

Antibacterial; Vaccine; bacterial infection.

Streptococcus agalactiae

FR2824074-A1.

31-OCT-2002

```
New recombinant DNA construct comprising a promoter positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source, useful for producing plants with improved properties.
                                Recombinant DNA construct; transformed plant; improved plant property; cold tolerance; heat tolerance; drought tolerance; herbicide; osmosis; pathogen tolerance; post tolerance; plant disease resistance; cell cycle pathway modification; plant growth regulator; homologous recombination; seed oil yield; protein yield; carbohydrate; nitrogen; phosphorus; photosynthesis; lignin; galactomannan; bacterial polypeptide.
                                                                                                                                                                                                                                                                          Goldman BS;
                                                                                                                                                                                                                                                                                                                                                       Claim 1; SEQ ID NO 13733; 122pp; English.

The invention relates to a recombinant DNA construct comprising a provide for expression of a polynucleotide encoding a polypeptide from a microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a transformed plant having an improved property. The plant is a crop plant comprising the recombinant DNA construct and a method of producing a transformed plant having an improved property comprises transforming a plant with the nerombinant DNA construct and growing the transformed plant, where the comprise or polypeptide is useful for improving plant with the recombinant DNA construct is useful for improving plant properties. The recombinant DNA construct is useful for producing plant properties. The recombinant DNA construct is useful for producing plant properties. Conference to herbicides, extreme osmotic conditions, pathogens or pests, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of homologous recombination, modified seed oil or protein yield and/or content, improved yield by modification of carbohydrate, nitrogen or phosphorus use and/or uptake, by modification of photosynthesis or by providing improved plant growth and development under at least one stress condition, improved plant growth and development under at least one stress condition, improved plant growth and development under at least one stress condition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ..

The present invention relates to novel Streptococcus agalactiae
nucleotide sequences (I, ADV87607-ADV87745) and novel polypeptides (II;
ADV8746-ADV8950). The nucleotide sequences encode polypeptides of S.
ADV8746-ADV89590. The nucleotide sequences encode polypeptides of S.
agalactiae involved in the synthesis of amino acids, cell membranes, intermediate (central) metabolism, energetic metabolism, farty acid and phospholipid metabolism, nucleotide metabolism including purines,
CC pyrimidines and/or nucleosides, regulatory functions, replication, transportion, transportes, eall membranes and/or analogues, functions related conditions, sensitivity to medicines and/or nalogues, functions related transporters, cell membrane proteins and cellular machinery. (I) are useful for the detection and/or amplification of nucleic acids.
CD Pharmaceutical composition comprising (I) or (II) are useful for the detectial S. agalactiae infection. Note: WO200292818A2 is equivalent for the present basic patent FR282407AA1. WO200292818A2

                                                                                                                                                                                                                                                                                                                                          Interpretation in the pressure and a properties of and a protection sequences (II, ADV7899-ADV81203 and ADV81205-ADV83340.) The nucleotide sequences encode polypeptides of S. agalacticae involved in the synthesis of amino acids, cell membranes, intermediate (central) metabolism, energetic metabolism, fatty acid and phospholipid metabolism, nucleotide metabolism, transcription, translation, protein transport, daptation to atypical conditions, sensitivity to medicines and/or analogues, functions related to transposons, biosynthesis of cofactors, prosthetic groups and transporters, cell membrane proteins and cellular machinery (I) are useful for the detection and/or amplification of nucleic acids. Pharmaceutical composition comprising (I) or (II) are useful for the detection and/or amplification of nucleic acids. Pharmaceutical composition comprising (I) or (II) are useful for treatment of a bacterial S agalactiae infection. The complete
                                                                                                                                                                                                                                                              Genomic nucleotide sequences encoding polypeptides of Streptococcus agalactiae for the development of vaccines, diagnostic tools, DNA chips and identification of therapeutic targets.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               genome of Streptococcus agalactiae is given in ADV81204. Note: The present patent is an equivalent for the basic patent FR2824074A1, which
                                                                                                                                                                                                                  Kunst F;

nucleotide sequences (I; ADV78860-ADV78998 and ADV83341-ADV85476) and nucleotide sequences (I; ADV78860-ADV81203 and ADV81205-ADV83340). The nucleotide sequences encode polypeptides of S. agalactiae involved in the synthesis of amino acids, cell membranes, intermediate (central) cartabolism, energetic metabolism, fatty acid and phospholipid metabolism, ncleding purines, pyrimidines and/or nucleosites, regulatory functions, replication, transcription, translation, protein transport, adaptation to atypical conditions, sensitivity to medicines and/or analogues, functions related to transposts, possible of cofactors, prosthetic groups and transporters, cell membrane proteins and cellular machinery. (I) are useful for the detection and/or amplification of nucleic acids. Pharmaceutical composition comprising (I) or (II) are useful for the detection and/or amplification of nucleic acids. Pharmaceutical composition comprising (I) or (II) are useful for the detection and/or amplification of successions and patent of a bacterial S. agalactiae infection. The complete genome of Streptococcus agalactiae is given in ADV81204. Note: The
                                                                                                                                                                                                                                                                                                                              Genomic nucleotide sequences encoding polypeptides of Streptococcus agalactiae for the development of vaccines, diagnostic tools, DNA chips and identification of therapeutic targets.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                             Kunst
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Vaccine, urinary tract infection; bacteraemia; endocarditis; wound; abdominal-pelvic infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to novel Streptococcus agalactiae
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ;

New isolated nucleic acid derived from Enterococcus faecium encoding an Enterococcus faecium polypeptide useful for detection, prevention and treatment of a pathological condition resulting from a bacterial

infection.

Example 1; SEQ ID NO 6868; 243pp; English

nucleic acid is useful for recombinant production of Candida albicans derived peptides or antisense polypeptides. Pharmaceutical compositions and vaccines containing the nucleic acid are useful for preventing or treating Enterococcus faecium infections. The present sequence represents The invention relates to an isolated nucleic acid derived from Enterococcus faecium encoding an Enterococcus faecium polypeptide having one of 10 fully defined sequences given in the (or comprising 40 sequential nucleotides chosen from any of the nucleic acids, its complement or sequences hybridising to it). Also included are a reasonable nucleic acid operably linked to reasonable to reasonable in the nucleic acid operably linked to single-stranded probe comprising the nucleic acid. The nucleic acids is useful for diagnosing pathological conditions regulatory element. Adagnosing pathological conditions regulating from E. faecium bacterial infection (e.g. urinary tract infection, bacteraemia, endocarditis, wounds and abdominal-pelvic infection) and for screening drugs such as agonists and antagonists. The infection, and for screening drugs such as agonists and antagonists. one if the disclosed E. faecium proteins.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GENERAL INFORMATION:

Patent No. 6551795

GENERAL INFORMATION:

Patent No. 6551795

GENERAL INFORMATION:

TITLE OF INVENTION:

PILE REFERENCE: 107196-02-18

CURRENT APPLICATION NUMBER: US/09/252,991A

CURRENT PILING DATE: 1999-02-18

PRIOR FILING DATE: 1998-07-18

PRIOR FILING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142

SEQ ID NO 19339
                                                                                                                                                                                                                                                                                         APPLICANT: MARC J. Rubenfield et al.
APPLICANT: MARC J. Rubenfield et al.

Sequence 13733, Application US/10369493

Sequence 13733, Application No. US20030233675A1

GENERAL INFORMATION:
APPLICANT: Gregory J.
APPLICANT: Slater, Steven C.
APPLICANT: Gldman, Barry S.
APPLICANT: Chen, Xianfeng
TITLE OF INVENTION: EXPRESSION OF MICROBIAL PROTEINS IN PLANTS FOR PRODUCTION OF TITLE OF INVENTION NUMBER: US/10/369, 493
CURRENT APPLICATION NUMBER: US 60/360,039

PRIOR FILING DATE: 2002-02-21
NUMBER OF SEQ ID NOS: 47374

SEQ ID NO 13733
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
